Top Challenges

One size doesn't fit all

Can public cloud meet availability, security & performance needs?

- Disparate workloads require more than one cloud
- *85% of Enterprises are using Multi Cloud (RightScale)*

Full-Stack Expertise

Do you have enough expert talent?

- Technology is constantly evolving and becoming more complex
- Hiring and training is a challenge
- Full-Stack integration is a challenge

Complexity

How efficiently do we manage it all?

- DevOps is becoming ubiquitous
- 25% of companies are using more than one DevOps tool (RightScale)
- Integrating these tools adds significant complexity

UnitedLayer solves these challenges ...

UnitedLayer: The Managed Enterprise Multi-Cloud company

One size doesn't fit all

Solution:

Multi-Cloud, built with a Private Cloud having:

- High-Availability
- High-Security
- High-Performance
- 30% lower cost

with an on-demand API to connect to public clouds, delivers on Hybrid IT needs

Full-Stack Expertise

Solution:

Full-stack services:

- Compliance
- Security
- Application
- Platform
- Infrastructure
- Connectivity

managed as a tightly integrated solution, offer a comprehensive SLA, and solve business needs

Complexity

Solution:

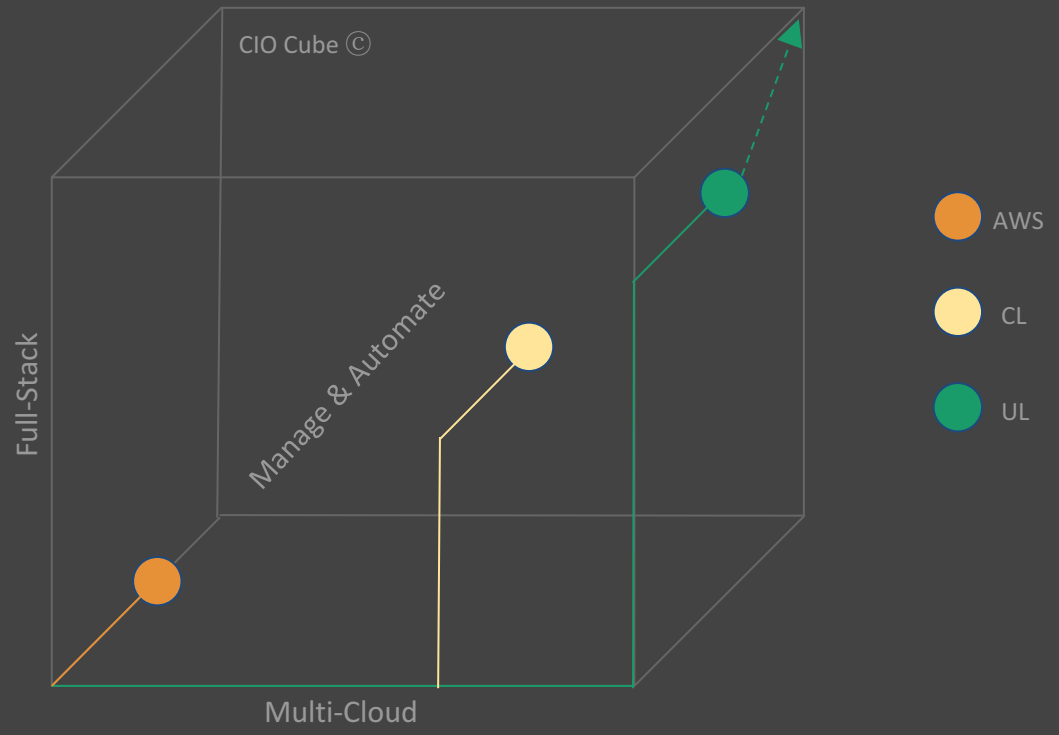
DevOps as-a-Service:

- Unified Multi-cloud management
- Unified full-stack management
- Automated provisioning
- Containers
- Release automation

makes Operations run efficient and smart

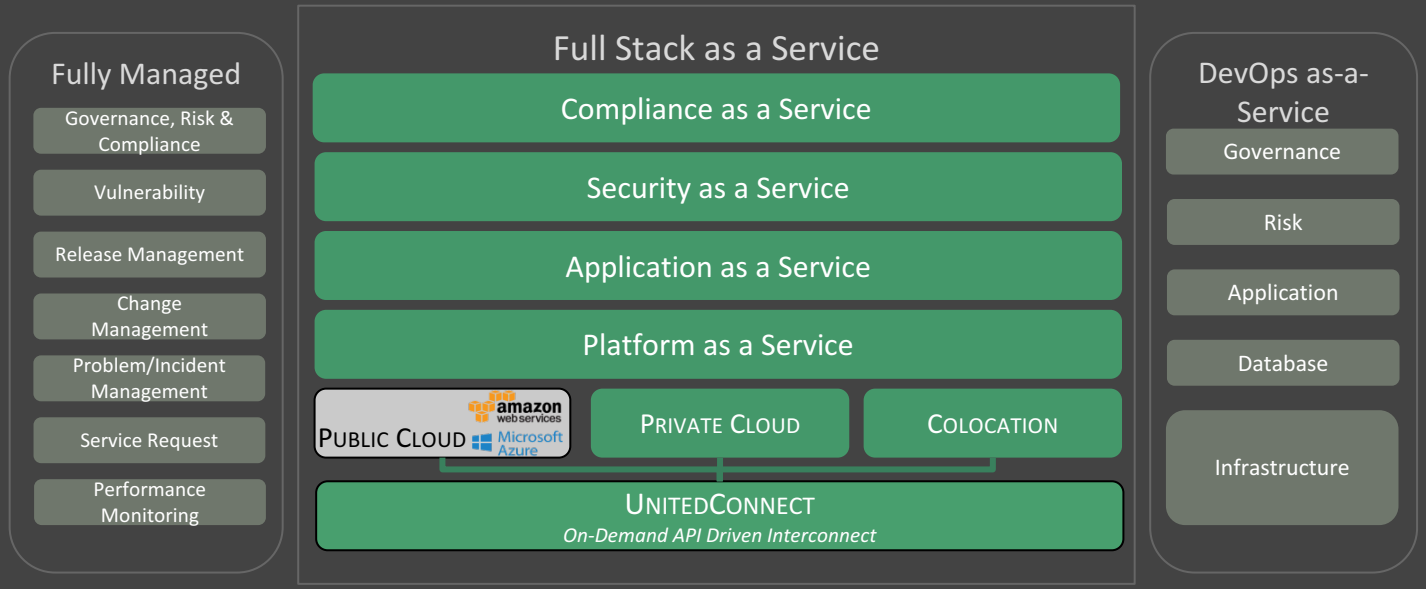
Enterprises need …

Multi-Cloud. Full Stack. Management & Automation.

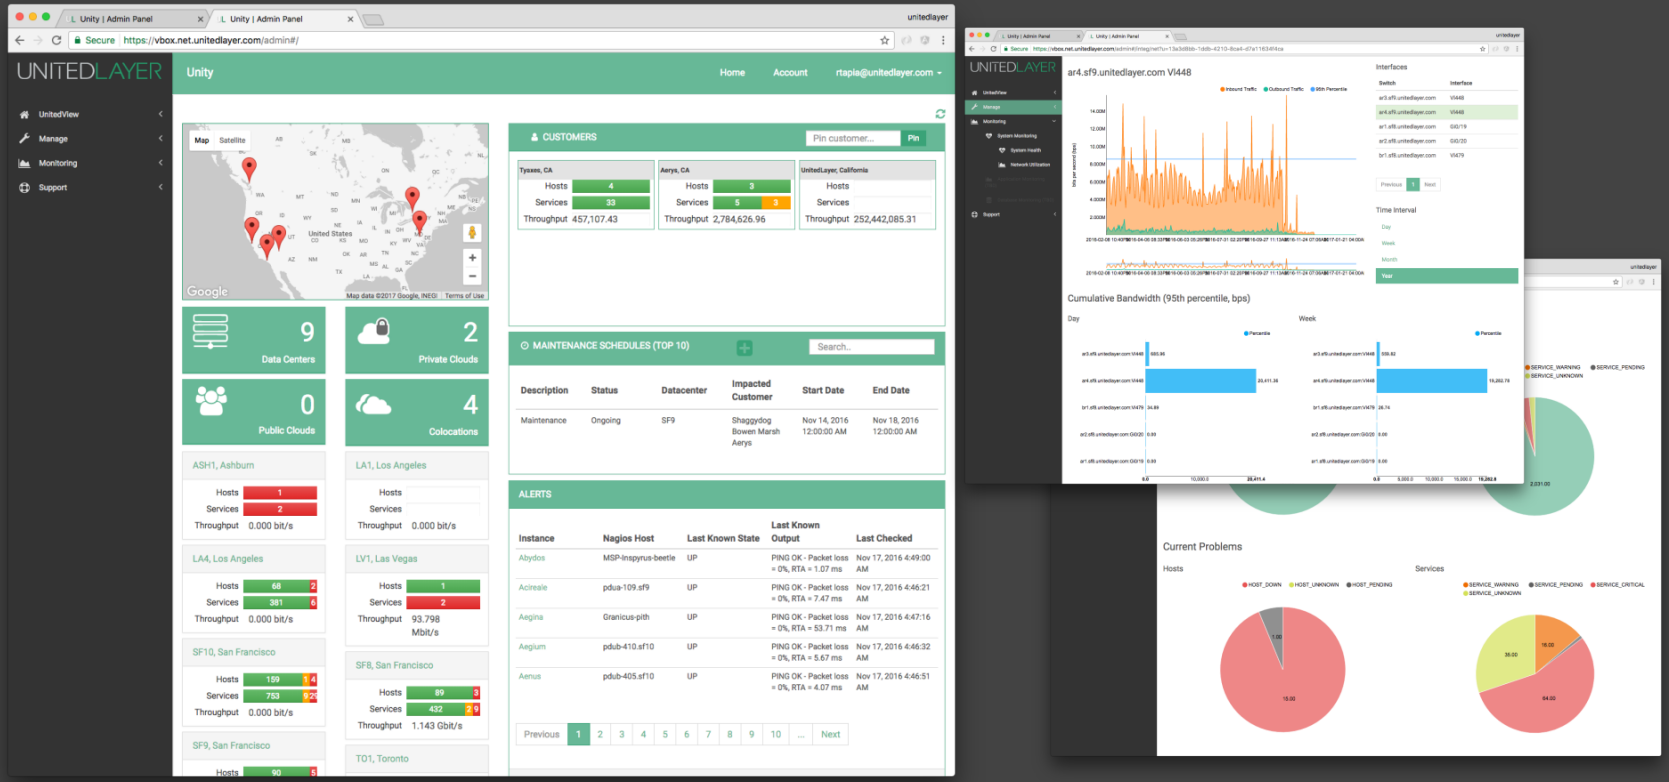


Multi-Cloud. Full Stack -aaS. DevOps-aaS powered by UNITY

Unified Multi-Cloud Management and Visualization Platform
Includes Management, Monitoring, and Visualization of Full-Stack Services
Includes DevOps-as-a-Service Delivery and Management



Unified Management powered by UNITY



Case Study: Granicus: Government's Favorite Cloud

About Granicus

- Granicus is the leader in Legislative Management SaaS, with customers in each of the 50 states, the US House, Senate and others

Business/Technical Challenge

- Hosting platform that can support integrated software & large volume video streaming.

What were they looking for? Why they picked UL?

- A Partner to deliver its latency sensitive solutions across North America
- UnitedLayer took the time and effort to understand the complexity of Granicus solutions and customer usage

How UL solved the problem?

- UnitedLayer created Custom, Fully Managed, Multi Geography replicated private clouds in the US and Canada including dedicated DR

"We need a partner that understands our niche as we have many layers of technology that need to work well together."

Sherif Agib
VP Services

Case Study: TeraRecon - Medical Imaging

About TeraRecon:

- TeraRecon is the largest independent, vendor neutral medical image viewing solution provider with a focus on advanced image processing innovation.

Business/Technical Challenge

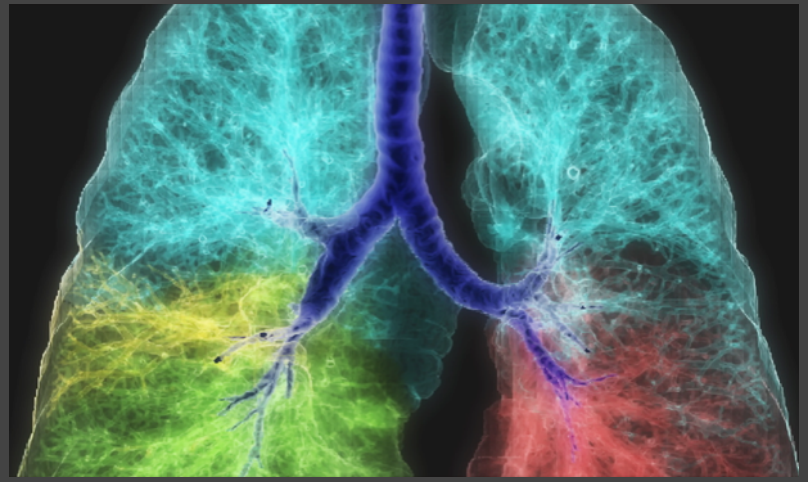
- HIPAA compliance, security, performance
- Preserving the existing investment in newer storage & network hardware
- End of life server hardware

What were they looking for? Why they picked UL?

- Enterprise Hosting solution that can integrate existing custom hardware
- UnitedLayer provided a custom that delivers performance, security, and HIPAA compliance.

How UL solved the problem?

- Multi Geography, high performance, multi-cloud hosting
- Using DR as multi purpose environment with the ability to protect both customer and corporate data.



iNtuition Private Cloud delivers powerful 3D imaging, makes images transport to the cloud simple and reliable, and supports post-processing collaboration.

Case Study: City of San Francisco: Home of Innovation

About San Francisco

- The City of San Francisco (CCSF) is the center of technology innovation .
- The Department of Technology (DT) serves city services to city employees and residents.

Business/Technical Challenge

- Hosting platform that can support emergency services, integrated with each of the city's 19 departments.

What were they looking for? Why they picked UL?

- CCSF needed reliability and performance with the ability to deliver integration across departments.
- UnitedLayer designed a Multi Cloud solution to deliver the needs of CCSF.

How UL solved the problem?

- UnitedLayer Multi Cloud for CCSF integrated Colocation, Cloud & Connectivity.

"As we grow into the future, UnitedLayer has the ability to grow with us. They provide us with that Peace of Mind"

Glacier Ybanez
Manager of Data Center and Operations Support

UNITEDLAYER

Product Overview

UnitedLayer

UnitedLayer: Private Cloud

Dedicated Custom Designed Managed Private Cloud

- Virtualization powered by VMware, OpenStack & Hyper-V
- Dedicated Bare Metal servers
- Enabled with Container technology
- Enterprise Hardware from Dell, HPE, & SuperMicro

Guaranteed Performance

- Enterprise SAN with IOPS performance from 10K to 200K+
- Nimble Storage, Hitachi Data Systems, EMC & NetApp

High Availability & Scalability

- 99.99% Uptime by design
- N+1 Compute Architecture with DRS
- 20% Excess Capacity Available from Day 1

Access to Public & Private Resources via UnitedConnect

- Connected to the Enterprise datacenters
- Connect to Azure Express Route & AWS connect

Enterprise Security & Compliance

- Built for Industry Compliance & best Security practices
- 24x7x365 NOC & SOC

Out of Band Management Network

Bare Metal Servers

Enterprise Virtualization

Enterprise High Performance Storage

LAN

High Availability ISPs

Enterprise Co-Location Datacenters

UnitedLayer: Multi-Cloud

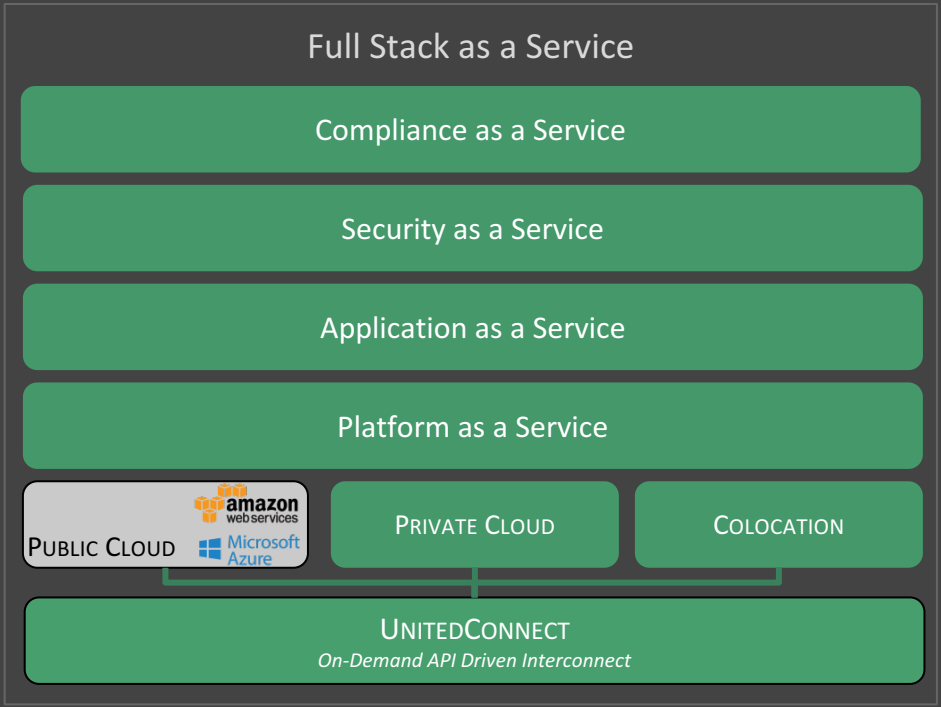
Managed Private Cloud

Connected to Public & Private Cloud Resources

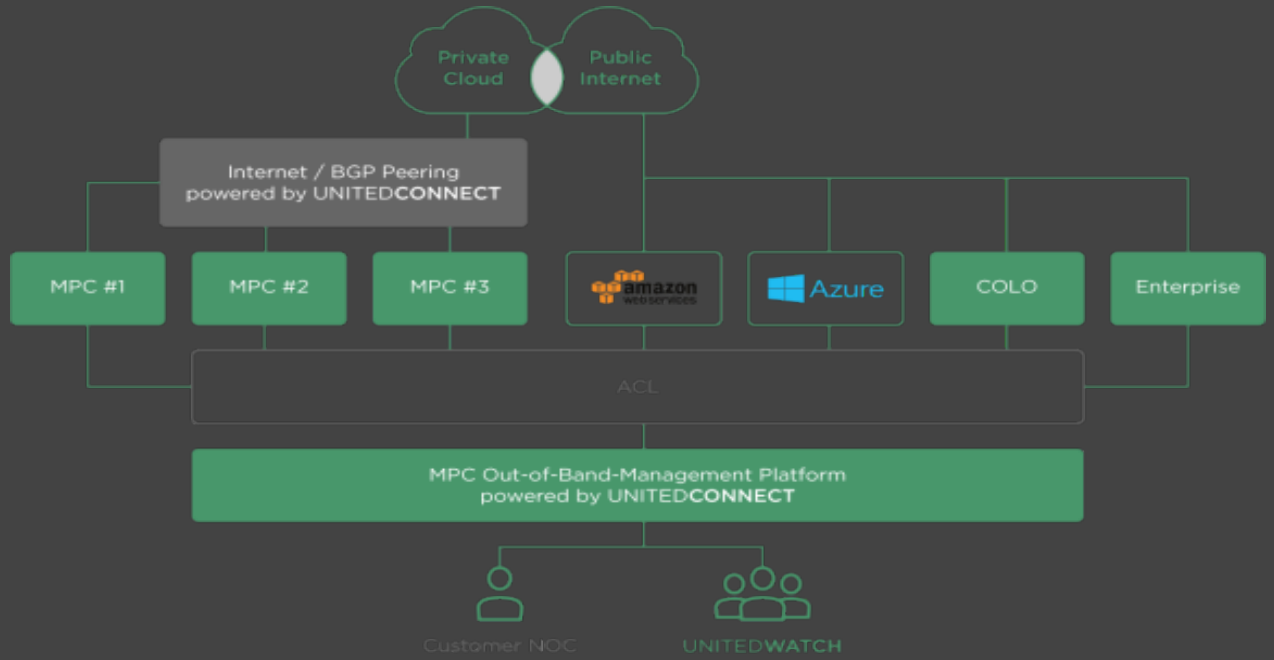
Enterprise Security & Compliance

Fully Managed & Monitored by Enterprise technologies using UNITY

Enabled by DevOps as a Service



UnitedConnect - An API Driven On-Demand Connectivity Platform



Disaster Recovery and Business Continuity Private Cloud

Built for Guaranteed Application RPO & RTO

- SAN Replication | DB Replication | VM Replication
- GSLB Support for Automatic Failover
- Manual Failover Support & Run-Books
- Data Retention to meet compliance/business needs
- Fully Monitored and Managed
- Runbooks for DR/BCP
- Twice a year DR/BCP Testing

Adaptive Cloud (Automatic Transformation):

- Dev, Test, QA, Demo Cloud during non-DR events
- DRBC Cloud during DR events

Bi-Annual Disaster Recovery Testing
& Reporting

Unified Multi Cloud Management & Monitoring
powered by UNITY

RTO specific
Failover Management

RPO specific
Multi Application Replication Management

Replication Optimized
Platform as a Service

Enterprise Connectivity & Integration
powered by UnitedConnect

Enterprise Private Cloud

UnitedLayer: Security as a Service

Built for Hardened Security:

- 24x7x365 Security Operations Center (SOC)
- Security Events & Incident Management Services (SEIM)
- Penetration Testing & Ethical Hacking on External facing Services
- Secure Code Analysis per SDLC
- IDS/IPS | DoS/DDoS | Anti-Virus |
- Infrastructure Security Patch Management
- Application Security Patch Management
- Compliance-as-a-Service- including Daily, Weekly, Monthly, Quarterly & Yearly Compliance Tasks per Compliance Policies & Procedure.
- Internal Risk Assessment
- Services powered by Qualys & Tenable

Compliance as a Service

Secure Code Analysis

Penetration Testing & Ethical Hacking

Vulnerability Management & Remediation

DoS/DDoS Detection & Prevention

Intrusion Detection & Prevention Service

Anti Virus

UnitedLayer: Platform as a Service

OS Management

- OS standardization & certification w/ service
- Patch Management & Security fixes
- Monitoring & Alerting

Database

- Design, Build & Operate
- Encryption-at-Rest
- Patch management & Security fixes
- Monitoring & Alerting

Middleware / Application

- Design, Build & Operate – Apache/Tomcat, IIS/.Net, etc.
- Patch Management & Security fixes

Release & Change Management

Incident Management

Performance Management

Runtime & Healthcheck

Middleware & Application Management

Database Management

Operating System Management

UnitedLayer: Application as a Service

Runtime & Health Check / SLA

- Application Health monitoring & Alerting
- LB Health Check & Recovery
- Application Monitoring & Recovery

Performance Monitoring

- Monthly, Quarterly & per SDLC – external performance monitoring of application
- Application performance monitoring such as New Relic, and similar
- DB performance monitoring such as SQL Sentry, and similar
- Application log analysis using tools like Scalyr, and similar

Release & Change Management

Incident Management

Performance Management

Runtime & Healthcheck

Middleware & Application Management

Database Management

Operating System Management

UnitedLayer: DevOps as a Service

Orchestration & Automation

- Terraform: Cloud management platform
- Ansible: Management and Automation
- Chef: Management and Automation
- Puppet: Management and Automation

Containers Support

- Docker: Multi-Cloud deployment
- Kubernetes: Multi-Cloud deployment

Software Release Management

Change Management

Incident Recovery Management

Disaster Recovery Management

Compute Management
